Norwood Delivers New Log Moulding and Finishing Capabilities to Personal Sawmill Owners – Norwood Log Moulder 410

The increasing appeal of custom post and beam and log homes has created a demand from sawyers who want to make finished build-ready logs. Norwood Industries answers their customers' needs by announcing one of the most exciting products in many years – the Log Moulder 410. The LM410 doesn't only increase the productivity of sawyers – it opens up new business opportunities for all sawyers – building logs, finished posts, moulded columns – ready for use or sale.

Ashlynn Dale, Vice-President of Norwood Industries announced today, in cooperation with their European partner Logosol, the introduction of the Log Moulder 410. The 410 puts commercial-grade log-building and custom log-moulding capabilities into the hands of all sawyers.

“The LM410 came about as a result of hearing our customers”, says Dale, “Some dream of building their own log homes. Others, large woodlot owners, see commercial opportunities in building logs and custom-finished, specialty-moulded beams and pillars. The 410 meets all those needs.”

The Log Moulder's throat size easily handles beams as big as 24" wide by 24" high. But the real secret to the LM410 is that it works with a sawmill – it mounts on a mill's rails. Because the log is supported by the sawmill bed, the Log Moulder can handle oversize, overlength beams and boards that would choke anything but the biggest industrial planer/moulders.

Norwood's Log Moulder fits both their LumberMate 2000 and LumberLite 24 sawmills. Because the 410's adjustable carriage wheels can be configured from 33" to 38" apart, the Log Moulder also works on the LumberMate Mark 3 and Mark 4 models, and most personal sawmills made by other manufacturers.

The capacity of Norwood's 410 gives it unparalleled versatility. "Our customers want to be able to create a variety of shapes and finishes" continues Dale. "Our Log Moulder can create dozens of finished surfaces. It can smoothly plane large beams and boards. It can also mould cants to make unique pillars, posts, and columns. Of course, it can accurately joint and mould timbers for log-home construction. It can even be used to finish and sculpt oversized boards to make unique furniture".

As well as being versatile, the Log Moulder is efficient. "Sawyers want fast production. They can square a log on their mill, then, without moving the cant, fire up the 410 and immediately plane, joint or mould it. They can go from raw log to fully finished product, two operations, all on one single platform."

Whether you own a Norwood sawmill, or one from another manufacturer, Norwood's Log Moulder 410 can add production log moulding and finishing capability to your operation.

Contact Norwood Industries Inc. today to get more information on the Log Moulder 410, new from Norwood ... your partner in wood processing.
